- Hot Desk Facilities & Client Representation
- Marine Vessel Supply Management

**Now providing Asset Knowledge Management (AKM) to WTG sites.
Please contact us for a copy of our brochure and to arrange a demonstration.**

News and contracts:

In late summer 2010 we moved into a bespoke office at our Harrow Workshops, please see the slight change to our address below.

We have developed to commercial stage our Asset Knowledge Management (AKM) service which allows a completely secure, fully web based quality assured system for providing audits, inspections and due diligence on wind assets. This service also allows a complete inventory and time based record of all mandatory and legislative H&S requirements for assets providing notice, inspection and checks of components, systems and procedures. Please contact us for further details and a demonstration.

We continued input and support in marine energy projects for ScottishPower Renewables on their Duncansby Tidal Energy and Marwick Head Wave Energy sites including a local 1-2-1 forum for local businesses to discuss needs and services and an information stand at the Royal Mey Highland Games (see photo at top), opened by non other than HRH Prince Charles, Duke of Rothesay.

We have completed 2 phases of maintenance work at Forss 1&2 Wind Farms for RES and now aiming to provide additional maintenance works for this site and Forss 3 as it goes through the planning process.

We have acted on behalf of a consultancy providing of CDM 2007 Coordinator services and utilising our engineering and marine experience for a tidal installation at Orkney (confidential client). We also continue to provide electrical design and commissioning for infrastructure upgrades and installations for a number of wave and tidal projects on Orkney.

We have been working with Prontoport to supply H&S and O&M Management services to a number of sites in the UK.
